

Structure Plane

Concerns

How to get there, Where you can go from there, Categories of information

The way information is presented, How the information is organized, Intuitive interaction

Linear Narrative or Non Linear/Hyperlinked Narrative

Interaction Design (IXD)

Consistent, Predictable, Learnable, Visible, Feedback

The website will contain a nav bar across the top using the burger button to open and collapse navigation for the site to jump to specific sections, Each section will also have a navigation option to return to the top of the page.

Index page will contain a list of sections for each of the individual navigation items these will be News/Introduction image at the top, The band section, The music section, The video section and then Contact us section this can also be scaled to include more.

News/Introduction section will be contained in a jumbotron at the top of the page this will contain a call to action or latest news on the band

Band section will give a break down of the band members and also what role they play in the band.

Music section will give a selection of audio for the user to play on demand

Video section will show a current video for the user to play on demand

Contact us section will give the user an option to contact the band if they wish to hire the band for an event.

Social Media Buttons will be included in both the header and footer, there will also be social media buttons on the audio and media sections.

Information Architecture (IA)

One Page design that is broken into different sections that the user can jump between easily using the nav bar at the top of the page.

This will be a responsive design and will work across a range of devices.
